2025-04-22

## Abstract

Life on Earth is sustained by complex interactions between organisms and their environment. These biotic interactions can be captured in datasets and published digitally. We present a review and archiving process for such an openly accessible digital interactions dataset of known origin and discuss its outcome. The dataset under review, named `globalbioticinteractions/unhc`, has fingerprint hash://md5/a0a8aa080e99019f71810a048dfe7da1, is 3.99MiB in size and contains 3,200 interaction with 5 unique types of associations (e.g., `interactsWith`) between 212 primary taxa (e.g., *Bombus impatiens*) and 204 associated taxa (e.g., *Trifolium repens*). This report includes detailed summaries of interaction data, a taxonomic review from multiple catalogs, and an archived version of the dataset from which the reviews are derived.

## Introduction

### Data Review and Archive

Data review and archiving can be a time-consuming process, especially when done manually. This review report aims to help facilitate both activities. It automates the archiving of datasets, including Darwin Core archives, and is a citable backup of a version of the dataset. Additionally, an automatic review of species interaction claims made in the dataset is generated and registered with Global Biotic Interactions (J. H. Poelen, Simons, and Mungall 2014).

This review includes summary statistics about, and observations about, the dataset under review:

University of New Hampshire Collection of Insects and other Arthropods UNHC-UNHC <https://github.com/globalbioticinteractions/unhc/archive/f72575a72edda8a4e6126de70205-04-19T03:53:37.232Z> hash://md5/a0a8aa080e99019f71810a048dfe7da1

For additional metadata related to this dataset, please visit <https://github.com/globalbioticinteractions/unhc> and inspect associated metadata files including, but not limited to, *README.md*, *eml.xml*, and/or *globi.json*.

## Methods

The review is performed through programmatic scripts that leverage tools like Preston (Elliott et al. 2025), Elton (Kuhn, Poelen, and Leinweber 2025), Nomer (Salim and Poelen 2025), globinizer (J. Poelen, Seltmann, and Mietchen 2024) combined with third-party tools like grep, mlr, tail and head.

Table 1: Tools used in this review process

tool name	version
preston	0.10.1
elton	0.15.9

tool name	version
nomer	0.5.13
globinizer	0.4.0
mlr	6.0.0
jq	1.6
yq	4.25.3
pandoc	3.1.6.1

The review process can be described in the form of the script below <sup>1</sup>.

```
# get versioned copy of the dataset (size approx. 3.99MiB) under review
elton pull globalbioticinteractions/unhc

# generate review notes
elton review globalbioticinteractions/unhc\
> review.tsv

# export indexed interaction records
elton interactions globalbioticinteractions/unhc\
> interactions.tsv

# export names and align them with the Catalogue of Life using Nomer
elton names globalbioticinteractions/unhc\
| nomer append col\
> name-alignment.tsv
```

or visually, in a process diagram.

Figure 1: Review Process Overview

You can find a copy of the full review script at [check-data.sh](#). See also [GitHub](#) and [Codeberg](#).

<sup>1</sup>Note that you have to first get the data (e.g., via `elton pull globalbioticinteractions/unhc`) before being able to generate reviews (e.g., `elton review globalbioticinteractions/unhc`), extract interaction claims (e.g., `elton interactions globalbioticinteractions/unhc`), or list taxonomic names (e.g., `elton names globalbioticinteractions/unhc`)

## Results

In the following sections, the results of the review are summarized <sup>2</sup>. Then, links to the detailed review reports are provided.

### Files

The following files are produced in this review:

filename	description
biblio.bib	list of bibliographic reference of this review
check-dataset.sh	data review workflow/process as expressed in a bash script
data.zip	a versioned Preston (Elliott et al. 2025) archive of the data under review
HEAD	the digital signature of the data under review
index.docx	review in MS Word format
index.html	review in HTML format
index.md	review in Pandoc markdown format
index.pdf	review in PDF format
indexed-citations.csv.gz	list of distinct reference citations for reviewed species interaction claims in gzipped comma-separated values file format
indexed-citations.html.gz	list of distinct reference citations for reviewed species interactions claims in gzipped html file format
indexed-citations.tsv.gz	list of distinct reference citations for reviewed species interaction claims in gzipped tab-separated values format
indexed-interactions-col-family-col-family.svg	network diagram showing the taxon family to taxon family interaction claims in the dataset under review as interpreted by the Catalogue of Life via Nomer Corpus of Taxonomic Resources (J. H. (ed. ). Poelen 2024)

## Archived Dataset

Note that *data.zip* file in this archive contains the complete, unmodified archived dataset under review.

## Biotic Interactions

In this review, biotic interactions (or biotic associations) are modeled as a primary (aka subject, source) organism interacting with an associate (aka object, target) organism. The dataset under review classified the primary/associate

Figure 2: Biotic Interaction Data Model

organisms with specific taxa. The primary and associate organisms The kind of interaction is documented as an interaction type.

The dataset under review, named globalbioticinteractions/unhc, has fingerprint hash://md5/a0a8aa080e99019f71810a048dfe7da1, is 3.99MiB in size and contains 3,200 interaction with 5 unique types of associations (e.g., interactsWith) between 212 primary taxa (e.g., *Bombus impatiens*) and 204 associated taxa (e.g., *Trifolium repens*).

An exhaustive list of indexed interaction claims can be found in gzipped csv and tsv archives. To facilitate discovery, a preview of claims available in the gzipped html page at [indexed-interactions.html.gz](http://indexed-interactions.html.gz) are shown below.

The exhaustive list was used to create the following data summaries below.

Table 3: Sample of Indexed Interaction Claims

sourceTaxonName	interactionTypeName	targetTaxonName	referenceCitation
<i>Bombus vagans</i>	interactsWith	<i>Rubus</i> sp.	<a href="https://scan-bugs.org:443/portal/collections/individual/index.">https://scan-bugs.org:443/portal/collections/individual/index.</a>

### Interaction Networks

The figures below provide a graph view on the dataset under review. The first shows a summary network on the kingdom level, and the second shows how interactions on the family level. It is important to note that both network graphs were first aligned taxonomically using the Catalogue of Life. Please refer to

the original (or verbatim) taxonomic names for a more original view on the interaction data.

You can download the indexed dataset under review at [indexed-interactions.csv.gz](#). A tab-separated file can be found at [indexed-interactions.tsv.gz](#)

Learn more about the structure of this download at [GloBI website](#), by opening a [GitHub issue](#), or by sending an email.

Another way to discover the dataset under review is by searching for it on the [GloBI website](#).

## Taxonomic Alignment

As part of the review, all names are aligned against various name catalogs (e.g., col, ncbi, discoverlife, gbif, itis, wfo, mdd, tpt, pbdb, and worms). These alignments can help review name usage or aid in selecting of a suitable taxonomic name resource.

Table 8: Sample of Name Alignments

providedName	relationName	resolvedCatalogName	resolvedName
Andrena algida	HAS_ACCEPTED_NAME	col	Andrena algida
Andrena asteris	HAS_ACCEPTED_NAME	col	Andrena asteris
Andrena barbilabris	HAS_ACCEPTED_NAME	col	Andrena barbilabris
Andrena braccata	HAS_ACCEPTED_NAME	col	Andrena braccata

Table 9: Distribution of Taxonomic Ranks of Aligned Names by Catalog. Names that were not aligned with a catalog are counted as NAs. So, the total number of unaligned names for a catalog will be listed in their NA row.

resolvedCatalogName	resolvedRank	count
col	NA	57
col	genus	45
col	kingdom	1
col	species	303
col	subgenus	1
col	subspecies	9
col	variety	1
discoverlife	NA	231
discoverlife	species	177
gbif	NA	48
gbif	genus	46

wfo	species	103
wfo	subspecies	6
wfo	variety	1
worms	NA	337
worms	genus	29
worms	kingdom	1
worms	species	40
worms	subspecies	1

Table 10: Name relationship types per catalog. Name relationship type “NONE” means that a name was not recognized by the associated catalog. “SAME\_AS” indicates either a “HAS\_ACCEPTED\_NAME” or “SYNONYM\_OF” name relationship type. We recognize that “SYNONYM\_OF” encompasses many types of nomenclatural synonymies (ICZN 1999) (e.g., junior synonym, senior synonyms).

resolvedCatalogName	relationName	count
col	HAS_ACCEPTED_NAME	351
col	SYNONYM_OF	105
col	NONE	58
discoverlife	HAS_ACCEPTED_NAME	171
discoverlife	SYNONYM_OF	53
discoverlife	NONE	239

worms	associated names alignments report in gzipped html, csv, and tsv)

## Additional Reviews

Elton, Nomer, and other tools may have difficulties interpreting existing species interaction datasets. Or, they may misbehave, or otherwise show unexpected behavior. As part of the review process, detailed review notes are kept that document possibly misbehaving, or confused, review bots. An sample of review notes associated with this review can be found below.

Table 12: First few lines in the review notes.

reviewDate	reviewCommentType	reviewComment
2025-04-22T17:03:49Z	note	found unsupported interaction type with name: [coll. from]
2025-04-22T17:03:49Z	note	found unsupported interaction type with name: [coll. from]
2025-04-22T17:03:49Z	note	found unsupported interaction type with name: [coll. from]

reviewDate	reviewCommentType	reviewComment
2025-04-22T17:03:49Z	note	found unsupported interaction type with name: [coll. from]

In addition, you can find the most frequently occurring notes in the table below.

Table 13: Most frequently occurring review notes, if any.

reviewComment	count
found unsupported interaction type with name: [1]	16
found unsupported interaction type with name: [coll. from]	5
found unsupported interaction type with name: [attacks]	4
found unsupported interaction type with name: [CZ-2]	2

For additional information on review notes, please have a look at the first 500 Review Notes in html format or the download full gzipped csv or tsv archives.

## GloBI Review Badge

As part of the review, a review badge is generated. This review badge can be included in webpages to indicate the review status of the dataset under review.

Figure 5: Picture of a GloBI Review Badge <sup>3</sup>

Note that if the badge is green, no review notes were generated. If the badge is yellow, the review bots may need some help with interpreting the species interaction data.

## GloBI Index Badge

If the dataset under review has been registered with GloBI, and has been successfully indexed by GloBI, the GloBI Index Status Badge will turn green. This means that the dataset under review was indexed by GloBI and is available through GloBI services and derived data products.

If you'd like to keep track of reviews or index status of the dataset under review, please visit GloBI's dataset index <sup>5</sup> for badge examples.

<sup>3</sup>Up-to-date status of the GloBI Review Badge can be retrieved from the GloBI Review Depot

<sup>4</sup>Up-to-date status of the GloBI Index Badge can be retrieved from GloBI's API

<sup>5</sup>At time of writing (2025-04-22) the version of the GloBI dataset index was available at <https://globalbioticinteractions.org/datasets>

## Discussion

This review and archive provides a means of creating citable versions of datasets that change frequently. This may be useful for dataset managers, including natural history collection data managers, as a backup archive of a shared Darwin Core archive. It also serves as a means of creating a trackable citation for the dataset in an automated way, while also including some information about the contents of the dataset.

This review aims to provide a perspective on the dataset to aid in understanding of species interaction claims discovered. However, it is important to note that this review does *not* assess the quality of the dataset. Instead, it serves as an indication of the open-ness<sup>6</sup> and FAIRness (Wilkinson et al. 2016; Trekels et al. 2023) of the dataset: to perform this review, the data was likely openly available, **F**indable, **A**ccessible, **I**nteroperable and **R**eusable. The current Open-FAIR assessment is qualitative, and a more quantitative approach can be implemented with specified measurement units.

This report also showcases the reuse of machine-actionable (meta)data, something highly recommended by the FAIR Data Principles (Wilkinson et al. 2016). Making (meta)data machine-actionable enables more precise processing by computers, enabling even naive review bots like Nomer and Elton to interpret the data effectively. This capability is crucial for not just automating the generation of reports, but also for facilitating seamless data exchanges, promoting interoperability.

## Acknowledgements

We thank the many humans that created us and those who created and maintained the data, software and other intellectual resources that were used for producing this review. In addition, we are grateful for the natural resources providing the basis for these human and bot activities. Also, thanks to <https://github.com/zygoballus> for helping improve the layout of the review tables.

---

<sup>6</sup>According to <http://opendefinition.org/>: “Open data is data that can be freely used, re-used and redistributed by anyone - subject only, at most, to the requirement to attribute and sharealike.”

## Author contributions

Nomer was responsible for name alignments. Elton carried out dataset extraction, and generated the review notes. Preston tracked, versioned, and packaged, the dataset under review.
